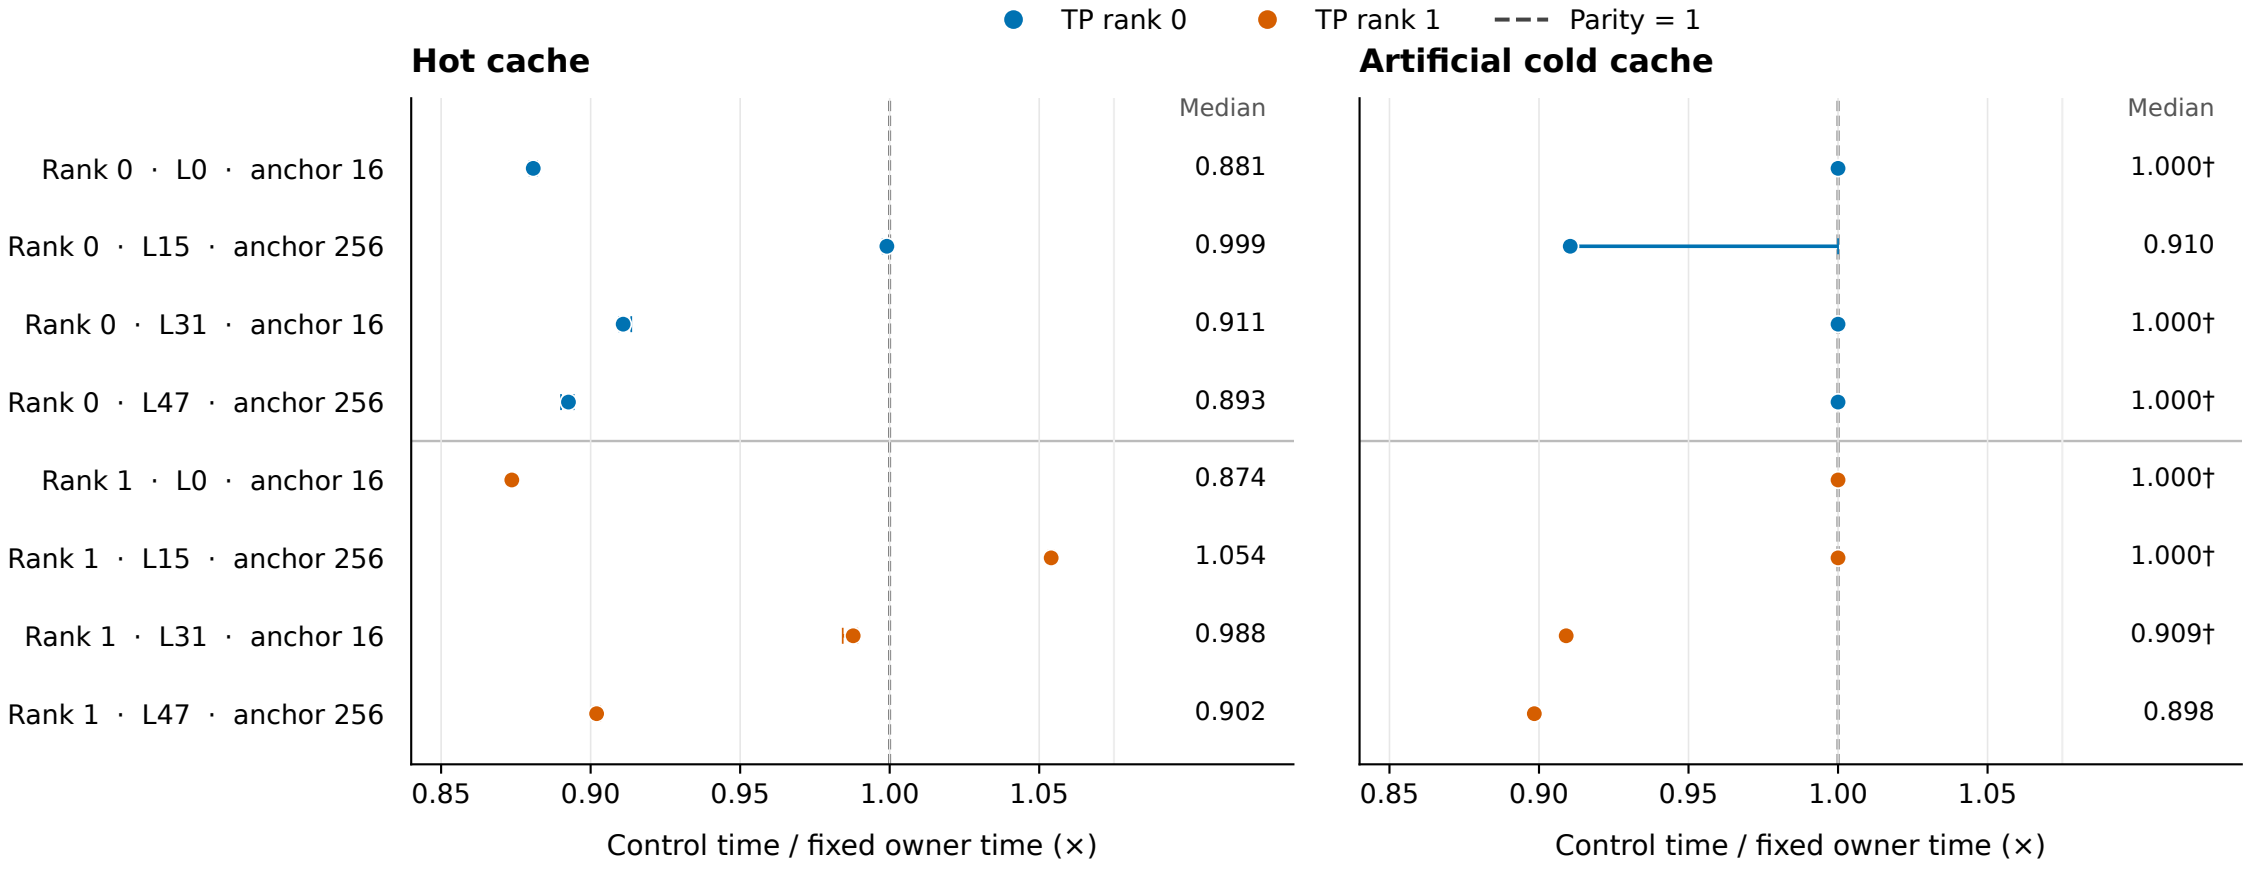
Fixed owner-task confirmation on one development document

Wave 25 only · B4 / GQA8 · 4K retained-token budget · predeclared C128 / N64



Points: paired speed-ratio medians; bars: 95% block-bootstrap intervals (40 random/reverse blocks, 10,000 draws per cell).

Controls: all 47 bounded native/E1-own/E4 configurations. Ratios >1 favor fixed owner. Complete O + natural-log LSE calls.

Eight correlated cells from one document; CIs describe within-cell timing. † Degenerate cold event CIs, including [1,1], do not prove equivalence.

No pooling or cross-wave best selection. Preparation/search are excluded from GPU events and reported separately in the raw results.
